The Spoken Word Audio Report 2021

Share of Ear®

- 4054 respondents
- National sample ages 13 and older
- Online and offline
  - Tracked since 2014
- Offered in English and Spanish

Spoken Word Audio Survey

- 1000 online interviews
- National survey of adults ages 18 and older
- In order to qualify, all respondents consume spoken word audio monthly
  (75% of US online population)

Spoken Word Audio Listener Interviews
Key Findings

1. Spoken Word’s share of audio listening has increased by 40% over the last seven years; 8% this year
2. Spoken word audio’s growth is driven by large increases in young and multicultural audiences
3. While most listeners cite the ability to multitask one of the main motivations for spoken word audio listening, young and multicultural audiences are more likely to cite other reasons such as connection, education, new perspectives, self-improvement
Spoken Word Audio’s Overall Growth
In the past month,

75% of the U.S. population listened to Spoken Word Audio

Listeners turn to spoken word audio for new perspectives
Perspectives

Curious listeners are seeking a new point of view

Carla: When I'm listening to someone talk, I'm hearing someone's stories, I'm hearing how their stories interact with my stories. I'm hearing sort of an opinion or a narrative that's different. And I really like the idea of seeing things from different sort of perspectives.

Viviana: I do think it provides different perspectives on stuff that we don't see in the media every day.

Sabharish: It definitely provides different perspectives than you would otherwise hear in social media or mainstream news channels, which can be definitely a lot more biased. I don't know. That's how I feel. And I mean, there's a lot of negativity also in social media and just things portrayed differently.

Rick: I really like to be open-minded, so I like to know more about what... Not just what's my bubble, me being Mexican American, living in California. I want to know about different parts of the world, country, different things like that. So it provides a perspective that I wouldn't have found anywhere else.

Spoken word audio provides the listener
an inward view
Self-improvement

Spoken word audio provides the listener an inward view

**Michael:** For motivation and encouragement, it kind of helps me understand more about how to be more successful and try to be more financially well-off. So some of the contents that I listen to are more based upon that. So it kind of gives me a sense of not giving up.

**Melvin:** So I went through a lot of mental trauma growing up, so being able to use that, what I learned from a podcast, and use it against my own trauma is super helpful and advantageous for myself.

**John:** You hear other people call in and someone who has a similar problem gives you an idea to try that you can apply to your situation or whatever.

**Sabharish:** You have to seek out what's out there, right? For you to take advantage of, you can't just live in a bubble and expect that the problem will just kind of go away. So I think it allows me to acknowledge the problems that I have and know that there is one or more solutions for it. And I just have to seek out and get out of my comfort zone and try to learn from that and implement that to better myself. And yeah, that's kind of how it helps me navigate the problems.

**Anahi:** You always want to improve yourself and better yourself, or being able to know how to handle situations as a mom, with your kids.

**Monica:** I can take things from each podcast that can help me become a better mom or be a better girlfriend or, eventually, be a good wife. So that's why I like to listen... Or, that's what I get from listening to those podcasts.

**Viviana:** I try to give off good energy just because energy is really important to me, especially within yourself. And if your energy is not good, or if it's bad, and you're kind of spreading that to others. So I do my best to keep my energy and my aura good that way when I do encounter other people that spreads good off to them. So that's one reason why I really like to listen to spoken word audio just so I can improve my positivity within myself that way and it'll spread to others.

Young and multicultural spoken word listeners use more discovery methods than other listeners – they are actively looking for content.

The spoken word audio topics that have increased listening over the past year are also topics that over index in growing segments of listeners.

Young and multicultural spoken word listeners are more likely to notice ads and sponsorships on spoken word audio.

These are not passive listeners, they are actively engaged in finding content that speaks to them.

The new listeners are changing the listening landscape.

The more engaged audiences are more tuned in to ads.

Source: The Spoken Word Audio Report from NPR and Edison Research
The fact that spoken word audio can provide on top of a busy life, makes it even more valuable to the listener.

Rick: So I do everything while listening. Working out, working, cleaning. I have a pool in the backyard that I maintain, so doing backyard maintenance I'll pop on headphones and listen to the backyard. And it takes my mind off of what I'm doing at the moment.

Sabharish: Definitely a lot of the kitchen work, meal prepping or cooking breakfast, whatever. Some cleaning around the house, I do while cooking. Oh, sorry. I do while listening to spoken work audio.

Melvin: I work, I'll swim, really anything.

Katy: Working, driving.

Anahi: Cooking, I'm washing dishes, I'm mopping, I'm sweeping, I'm doing laundry. You name it, cleaning my pool. I was cleaning my pool earlier. I'm going to go cut the grass after this. So probably putting my AirPods in.

Michael: So any time that I am not having a work meeting, I have some kind of audio going in the background. Either a podcast or some kind of station or on my app. I'm listening to any episodes that are available to listen to. So it's just something to keep me busy in the background. Cause I don't really like to work in silence.

Helyce: For me, I always been an anxious person, so I always need something running in the back of like, you know, to keep my mind focused on something.

Carla: That's actually my biggest reason for ever getting into audio or spoken word stuff to begin with. It was because I wanted to do more reading, but I didn't want to waste time for reading. And so when I started to listen to things, I was able to drive and do things. I was able to walk and do things. I was able to, you know, like when I was training for my first marathon I listened to this Swedish crime novel series, because they were so long and I could just run for hours and listen to the books and be distracted by the story and not the pain in my knee or whatever.

Faith: I really started picking it up when my life became more hectic and I just didn't have time to just sit down and relax and just watch something like I used to. Binge a series on Netflix, for example. I needed to become a better multitasker, essentially. Part of that I didn't want to lose my joy of my hobbies or listening to things or watching things. I didn't want to lose that, but it was hard to just sit down and have the time to, you know, like me time essentially. And sometimes I don't want my me time to be just watching something. I feel like it makes me feel like I'm wasting time. Especially as a mom, I'm just like, I have to be doing something.

Anahi: And I used to have more time to read actual books page by page and have more time to watch TV, documentaries and all that stuff. But with kids, I feel like I have to squeeze it into my life one way or the other. That's why I have my AirPods on and I'm doing things or I'm playing, I'm doing arts and crafts with them or eating and I'm trying to be present while I'm listening to it. They don't really notice that I'm listening to it, but I'm still giving them attention and still trying to get my me time.
Reasons Why People Listen Spoken Word Audio

Base: U.S. Online Population 18+ Monthly Spoken Word Audio Listeners

- Multitasking
- Made for people like you
- Perspectives you don’t hear in other media
- Want to better yourself
- Process info more efficiently
- Aware of more content

#SpokenWordAudio
Spoken word audio provides meaningful conversation in a “surface-level” digital world
Spoken word audio can provide meaningful conversation in a “surface-level” digital world

Brian: I guess I used to only listen to music, but now I think I listen to people talk more. Because I think it's probably a side effect of pandemic, you just want that more human connection, I guess.

Faith: I'm a little isolated because I don't go out too much outside of work and stuff. So it's a way to keep me connected to the outside world and know what's going on without knowing... Going myself out there.

Michael: It makes it sound like there's people around you. As if you're sitting at a restaurant or you're sitting at some kind of local establishment. And just having a meal, or you might be doing something, there's people around that are talking, so you just listen in on what's being discussed.

Rick: So I get a haircut every other week, so it's like being at the barbershop, where you're just relaxing with the guys and everyone in the shop, and just talking about whatever.

Rey: I drive by myself a lot, and I'm in my room alone a lot, so I'm... I just hate just hearing the AC, so now I'll just throw on a podcast.

Seema: When I start listening to a podcast I feel like, okay, people like me are talking about, and I can be also part of it.

Monica: They kind of reiterate you're not the only one. And they encourage moms out there, like, "It's okay, we go through it, too." So I think just that reassurance that there's actually other people out there that are going through the same thing as me.

Carla: A lot of the times, it feels like your friend is talking to you, and at a deeper level than most people talk to their friends. It's weird, we live in this really weird surface society. You don't want to pry, because you don't want to be that person that's prying, but also you don't want to have dumb conversations about nothing, about things that don't matter. I'm in that place right now, where I'm like, I don't... Talking to my friends and just giving me a run down of what you're doing isn't what I'm looking for.

Helyce: I can't stand watching TV or movies, especially new movies and TV shows. Because I feel like it's so on the surface and mass-produced, and it's trying to get to so many audiences that it's not fine-tuned to any real subject or meaningful... It's not very meaningful. So that's why I just listen to people talk, personally. Because it's more interesting to me.

Key Findings

1. Spoken Word’s share of audio listening has increased by 40% over the last seven years; 8% this year
2. Spoken word audio’s growth is driven by large increases in young and multicultural audiences
3. While most listeners cite the ability to multitask one of the main motivations for spoken word audio listening, young and multicultural audiences are more likely to cite other reasons such as connection, education, new perspectives, self-improvement
